

Middlesex County Military Installations

This map shows the locations of military installations that are identified by the United States Census TIGER Files to be located in Middlesex County in Massachusetts state. In addition to military installations, I overlayed urban zones, roads, and water in the county to attempt to find any correlation between the locations of these installations as it relates to the urban fabric. After analyzing the data, I have found no strong correlation between these installations as they relate to the urban fabric.

Data Sources:

Water areas, roads, primary roads, urban zones, Middlesex county boundary, and military installations from 2024 U.S. Census TIGER files.

All data accessed via tigris package. Walker K (2025). `tigris`: Load Census TIGER/Line Shapefiles. doi:10.32614/CRAN.package.tigris
<<https://doi.org/10.32614/CRAN.package.tigris>>, R package version 2.2.1,

1. I am fairly satisfied with this submission. Since I have no experience in R at all (and do have some experience in ArcGIS and QGIS) I wanted to challenge myself with learning this new program. I like that I was able to get all the information I was looking for onto the map, however if I had more time I would like to go back into the map and adjust the appearance/color palette. Also, when I have more skills, I would like to be able to experiment more with the legend placement and North arrow in R.
2. In order to complete this assignment, I used the supplemental course github website. I used two pages on the website "Skills: Displaying map data" and "U.S. Census TIGER files". Also, my classmate Micah Weese was able to help me troubleshoot plotting the water_area data layer.
3. I created the map in R using ggplot. I accessed the data using the tigris package. I created the layout of the sheet/legend in Adobe Illustrator. I also edited the color fills in illustrator while laying out the map.
4. Yes, you have my permission to post this work on the course website as an example.
