

Historic Denver and Subsequent Expansion

In 1918, the Denver Tourist and Publicity Bureau published this map for visitors who might be attracted to Denver based on its positioning as “The Gateway to 12 National Parks and 32 National Monuments. The city’s boundary, as shown on that map, occupied an area of about 59 square miles. The shaded green area below shows the areas that have been added to the City and County of Denver since that time, representing an additional 96 square miles: an increase of 162 percent.

Data sources:

Denver Tourist & Publicity Bureau. (1918). *Denver the Gateway to 12 National Parks and 32 National Monuments* [Map]. Clason Map Co.

Present-day municipal boundary from Denver Open Data catalog (https://opendata-geospatialdenver.hub.arcgis.com/datasets/53a0ae35c018471788efe36b6f730a79_40/), clipped to remove 1918 boundary as shown on 1918 map.

Text responses:

1. I am pleased with this submission. I recognize that the assignment did not require me to add a present-day layer, but I thought that addition added relevance to my measurement of the area of the historic city boundary. I chose not to add a legend or north arrow since these items were already present on the historic map.
2. I consulted the skills pages for this week, as well as for previous weeks since I had done most of my previous assignments in R, so I had some time reviewing how to, for instance, calculate areas in QGIS.
3. I created the map layout itself in QGIS, but I added all the text annotation in Microsoft Word.
4. Yes, you have my permission to share this work.
